

InfoCubeOS

The Entertainment,
Ordering,
and Paging System
for All Dining Establishments

InfoCubeOS is the revolutionary new Restaurant Paging System that also provides your customers with Local Information, Entertainment, and a First-Class Personal Ordering System for drinks and appetizers.

"Your Customers Will Love It."

Waiting for a table is now fun and entertaining. The InfoCubeOS digital screen with easy-to-use control panel provides your customers with everything from menu specials to trivia games (not to mention the graphical Maitre d' who invites them to their table when it's ready).

Each unit comes equipped with a variety of user-selectable entertainment options including: **Sports Trivia, Fun Facts, Famous Quotes**, and a host of other options. Between the entertainment clips are carefully placed messages that you want to send directly to your customer.

InfoCubeOS Up-sells Your Patrons While They Wait

Imagine showing off your **Dessert Menu, Drink Specials, or Upcoming Holiday Hours**. You can introduce your **Executive Chef** or even display your **Entire Menu**! Your InfoCubeOS is prepared to deliver a precise message to your customers while they wait for their table.

Get ready to WOW them and keep them coming back for more every time they think about dining.

Features:

- Drink and Appetizer Specials can be ordered directly from the Pager.
- Table Ready Notification with Lights, Vibration, Sound, and the Graphical Maitre d'
- Fun Facts, Trivia, Famous Quotes, and more
- Mini Commercials Customized to Your Establishment
- Easy-to-use Attendant Station
- Patron Statistics
- InfoCubeOS Anti-theft System

The Ordering Process is simple. By pressing the labeled buttons on the Pager, a customer can cycle through your customized menu to select one or more items. When the 'Order' button is pressed . . .

2

. . . the server is alerted. When the order is prepared, the server presses a button to alert the customer that the order . . .

3

. . . is ready to be picked up.

InfoCubeOS may be purchased as a complete system or may be interfaced to your existing POS system. Contact your InfoCubeOS Dealer for details.

The InfoCubeOS Attendant Station

Very happy staff with their InfoCube System at Stone Ridge Tavern Asheville, NC

Visual Pager Status:

The Attendant Station is backlit for easy reading under any lighting condition. The status of each pager is displayed on the screen. The Attendant Station is immediately notified when a Pager is out of range.

Whole Party or Individual Paging:

The Attendant Station performs all pages and receives confirmation of a successful page. The Attendant Station is able to page an entire party or page an individual of that party. This eliminates the arrival of the entire party at the Attendant Station when only one person is required.

Adjustable Channel Frequency:

The Attendant Station has a forty-five channel capacity. This flexibility allows for up to forty-five paging systems to operate in close proximity without interference. Pagers are not transferrable between restaurants.

The InfoCubeOS Charging Stand and Attendant Station

InfoCubeOS Records Patron Statistics

InfoCubeOS records important statistics which aid in management operations. InfoCubeOS records:

- Average Customer Wait-time
- Number of Pagers Used
- Number of Walk-away's

Patron statistics can be retrieved from the Attendant Station daily. With InfoCubeOS, lost revenues will be a thing of the past!

InfoCubeOS Has Memory To Spare

Each InfoCube Pager has over 500 slides of information and entertainment for hours of fun.

InfoCubeOS Anti-theft System

The Out-of-Range Notification (adjustable to a maximum of 300 feet) alerts the customer and the attendant when a Pager has moved out of range. The Pager responds with a gentle vibration and a message requesting the customer to return to the paging area. If the Pager is not returned, the notification escalates to inform the customer that the Pager will become inoperable. Lastly, the sound and vibration increase to their maximum, urging the customer to return to the restaurant.

InfoCubeOS is fantastic! Your customers are sure to tell their friends.

The InfoCubeOS Pager

Table Ready Notification:

The InfoCubeOS Pager plays a low melody, lights up, vibrates and displays the graphical Maitre d' inviting you to your table, when it's ready.

Conserves Energy for Hours of Fun:

InfoCubeOS Pager provides up to 10 hours of viewing on a single charge. The Pager recharges automatically when returned to the Charging Stand.

- Automatically stops charging when charge is complete.
- Adjust its own power output to conserve battery life.
